Bloodborne: Action/Thriller. Eric Mann is hiding a bloody secret. Or, to be more precise, his blood is hiding a secret that's bloody terrifying. After all, if he knew his blood's unique cellular structure had a certain pharmaceutical company searching for him since his birth, he might be looking over his shoulder. If he knew that terrorists need his blood to complete a plan to murder everyone in New York City, he might be running. But, what's even worse -- if nothing is done to reverse the bioengineering that occurred in his mother's womb -- his blood will kill him when he reaches 25...and that's just a few days away. The chase leads from Brooklyn, through Manhattan and up in to the bucolic mountains of Vermont. Along the way, Eric encounters a gorgeous TV reporter, multinational terrorists, a greedy drug company CEO and his father -- a brilliant biologist -- a man he didn't know existed until a few days ago.

Bloodborne is a thoughtful, action-packed thriller with a sense of humor -- and an ending that opens the door to a sequel.
